PINS ADVANTAGE

SOFTWARE ENGINEER

06.2021 -

01.2023

FRONTEND, PERFORMANCE, + UI/UX ENHANCEMENTS

- Led design system implementation and component library creation to improve maintainability and reusability. Resulted in DRYer codebase, faster frontend development, and at least 60% fewer UI issues reported during QA
- Improved data fetching + caching by switching to React Query from Redux. Optimistic updates and background fetching enhanced UI/UX; uncoupling server and client states improved maintainability; engineer efficiency increased by decreasing learning curve and boilerplate code

REQUIREMENT PLANNING + SUPPORT

- Managed 3-5 bugs per sprint, planned features with Product, and delivered 70% of all full stack features on time and in step with product roadmap
- Wrote and tested Laravel scripts to migrate 5 major legacy app customers, including LAX International, to v2 over two months. Reallocated 25% more technical resources from legacy bug fixes to v2 product + sprint goals and increased revenue from existing customers by supporting higher volumes of data

REST API IMPLEMENTATION FOR INTEGRATIONS

- To meet the customer need for project-tracking software integrations, built standalone custom integration UI, webhooks, and endpoints for Procore and Sage integrations
- Collaborated with principal engineers to establish, test, and document public REST API that enabled customers to create custom integrations and our team to focus on product development + bug remediation
